DEMOLITION CASE STUDY

Working as Principal Contractor, Greater London Demolition delivered full asbestos removal, before the internal strip out, Managed the logistics of removing all the waste in the busy Central London location.

We undertook the intricate demolition of the nine storey city centre office block. We achieved this by conducting floor by floor dismantling using mini excavators from floor eight to floor three then utilised our high reach demolition excavator to bring the building down to ground level.

We completed the scheme by removing the basement and implementing a complex temporary works system. This complex project was completed adjoining the University of London Library, Listed buildings in the City of London and sensitive Royal Courts of Justice sessions.

Daily noise monitoring and daily liaison with the local stakeholders was essential to ensure disruption from our demolition activities was kept to an absolute minimum.
